

Percutaneous Tracheostomy

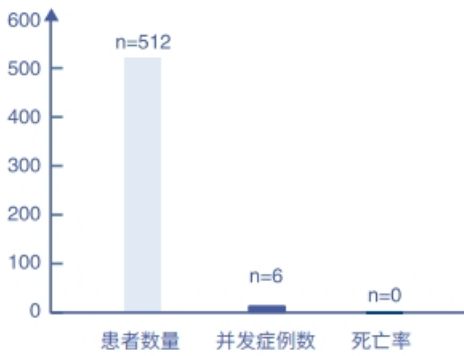

Purecath Percutaneous tracheostomy kit adopted specially designed guide wire and tracheal expansion pliers and used technology of Seldinger, which made the operation rapid and accurate, less trauma, less infection and aesthetic surgical incision.

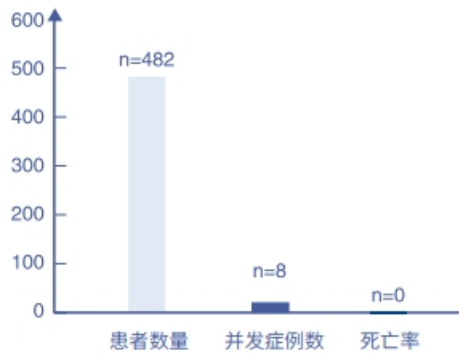

Since the advent of percutaneous pneumonectomy, it has been rapidly promoted in the clinic due to its characteristics of high safety, less operation time, simple operation and less postoperative complications. The operation range ranges from ICU emergency treatment, bedside operation, pre-hospital emergency treatment, etc., so as to win valuable time to save patients' lives.

There was no significant difference in the incidence of complications of percutaneous pneumonectomy between ordinary patients with pneumonectomy and patients with high pneumonectomy, which won valuable time for the rescue of patients with high-risk trauma and accelerated the recovery process of primary postoperative disease.

普通经皮气切

高危经皮气切

Order Information

Percutaneous Tracheostomy kit

Product description	Size	Specification
tracheostomy kit	PW16-T-60	60 represents intubation inner diameter size 6.0mm, others are 6.5,7.0,7.5,8.0,8.5,9.0,10.0
tracheostomy kit with pliers	PW16-T-60-F	
tracheostomy kit with intubation	PW16-T-60-C	
tracheostomy kit with intubation and pliers	PW16-T-60-FC	
tracheostomy kit with suction tube	PW16-S-60	
tracheostomy kit with suction tube and pliers	PW16-S-60-F	
tracheostomy kit with intubation and suction tube	PW16-S-60-C	
tracheostomy kit with intubation, suction tube and pliers	PW16-S-60-FC	

Remarks:

T: Tradition

S: Suction

F: Forceps

C: Cannula
